

May 1, 2010

Thanks for your inquiry about our products in regard to compliance with the new CPSIA regulations. In August 2008, the Consumer Product Safety Improvement Act (CPSIA) made a number of changes to consumer product safety laws in the USA. Under the new law, effective February 10, 2009 the lead limit for any children's product is 600 parts per million (ppm) total lead content by weight for any part of the product. The lead limit will be lowered again to 300 ppm total lead content by weight effective August 2009.

We are pleased to tell you that YES, Mountain Boy Sledworks products are compliant with the new CPSIA regulations. From day one, we have had a comprehensive testing program in place for all of the products we produce and sell. Our testing programs have always been in compliance with all US consumer product safety regulations, and we will continue to stay compliant even as some of these laws evolve and change.

As a result, you can continue selling our products with confidence knowing our products comply with the new total lead standards imposed under the CPSIA that become effective February 10, 2009. Of course, we also have General Conformity Certificates readily available for products produced after November 2008 as required under the CPSIA guidelines as further assurance of our products' compliance to CPSIA.

Thank you for your continued support!
